Skill Based Games

Our skill-based games are designed to test players' math skills, memory skills, patience, and strategy. Players are able to calculate their potential prizes in advance and can win in every available game. Performing correct calculations for the first three moves in the game selected by the player, for each of the available attempts, guarantees finding a win that exceeds the initially deposited funds by at least 1 CAD.In other words, players have total control over whether they win or lose.

This, as presented, is a skill-based game despite having a visual representation of a slot machine reel system.

Developed in Consultation with Lawyers

We always consult with a lawyer to ensure that our games comply with applicable laws. Based on our consultation with our Canadian lawyer, we are confident that we have created an entertaining and rewarding skill-based game.

Skill

The skill in the Prime Skill Game depends on a player's ability to:

- Correctly calculate the Formula based off of the numbers provided in the Variables tab;

- Correctly determine the amount of credits that are available to be won within a game based on:

i. The number of plays a player may choose to use in a game; and,
ii. The corresponding values correctly calculated from the Formula;

Therefore, this is not an illegal gaming device under the Criminal Code and is not in contravention of the Unlawful Provisions under the Liquor Licence Act and Ontario Regulations.

Summary

In summary, we have taken the following steps to ensure that our games are skill-based games:

- Any chance present in the game is an "unpredictable that may occasionally defeat skill" such as an incorrect calculation or poor strategy;

- To the extent there are random elements in the game, those elements do not affect the actual gameplay (no parts of the game are added to for the purpose of defeating skill and a skilled participant can play the game without losing);

- Players have total control over the Skill Game - it is the players' math skills, patience, and strategy which determine whether they will win at the Prime Skill Game.

- The control exercised by players is not so difficult that an ordinary player would be precluded from exercising skill;

- Players can see up to 1000 boards in advance; and

- Players know exactly how much they will win (the prize values do not change once they have been calculated).

SKILL GAME

Success is determined by one's skill level.
The player has a real impact on the game.
Devices operate without a random number generator.
Skillful players can win in every game.

SLOT MACHINE

The result is determined by luck.
The player has no impact on the game.
Random Number Generator
No guarantee of winning.

At Prime Skill Games we prioritize compliance as an integral part of our business operations. We understand the importance of adhering to industry regulations, standards and legal requirements to ensure trust and confidence of our customers and partners.
We are dedicated to complying with all applicable laws and regulations related to our industry.
